Engineering and Design
RETAINING AND FLOOD WALLS

Table of Contents

	<u>Subject</u>	<u>Paragraph</u>	<u>Page</u>
CHAPTER 1.	INTRODUCTION		
	Purpose	1-1	1-1
	Applicability	1-2	1-1
	References and Bibliography	1-3	1-1
	Terms	1-4	1-1
	Scope	1-5	1-1
CHAPTER 2.	GENERAL DESIGN CONSIDERATIONS		
Section I.	Types of Retaining Walls		
	Common Types of Retaining Walls	2-1	2-1
	Gravity Concrete Wall	2-2	2-1
	Cantilever Reinforced Concrete Wall	2-3	2-1
	Alternate Types of Retaining Walls	2-4	2-1
Section II.	Types of Flood Walls		
	Common Types of Flood Walls	2-5	2-1
	Cantilever T-Type Wall	2-6	2-4
	Cantilever I-Type Wall	2-7	2-4
	Other Types of Flood Walls	2-8	2-4
Section III.	Differences Between Retaining and Flood Walls		
	Purpose of Walls	2-9	2-4
	Seepage and Leakage Control Requirements	2-10	2-4
	Wall Stability	2-11	2-6
	Special Flood Wall Monoliths	2-12	2-6
	Design Philosophy	2-13	2-6
	Stability Considerations	2-14	2-6
Section IV.	Coordination Between Disciplines		
	Engineering Team	2-15	2-6
Section V.	Geotechnical Investigations		
	Planning the Investigation	2-16	2-7
	Foundation Exploration and Site Characterization	2-17	2-7
	Testing of Foundation Materials	2-18	2-8
	In Situ Testing of Foundation Materials	2-19	2-10
	Backfill Materials	2-20	2-15
	Design Strength Selection	2-21	2-15

	<u>Subject</u>	<u>Paragraph</u>	<u>Page</u>
CHAPTER 3.	FORCES ON WALLS		
Section I.	Introduction		
	General	3-1	3-1
	Limit-Equilibrium Analysis	3-2	3-1
	Relationship of Forces to Sliding Analysis	3-3	3-1
Section II.	Earth Pressures and Forces		
	Cohesionless Materials	3-4	3-2
	Cohesive Materials	3-5	3-5
	Pressures in Soil-Water Systems	3-6	3-6
	Design Earth Pressures and Forces, Driving Side	3-7	3-6
	Design Earth Pressures and Forces, Resisting Side	3-8	3-8
	Design Earth Pressures and Forces on the Base	3-9	3-9
	At-Rest Earth Pressure Equations	3-10	3-11
	Strength Mobilization Factor	3-11	3-13
	Earth Force Calculation, Coulomb's Equations	3-12	3-17
	Earth Force Calculation, General Wedge Method	3-13	3-23
	Earth Pressure Calculations Including Wall Friction	3-14	3-37
	Distribution of Horizontal Earth Pressure	3-15	3-38
	Surcharge Effects	3-16	3-45
	Earth Pressures Due to Compaction	3-17	3-47
Section III.	Water Pressures		
	Pressure Calculations	3-18	3-53
	Seepage Analysis by Line-of-Creep Method	3-19	3-55
	Seepage Analysis by Method of Fragments	3-20	3-55
	Seepage Analysis by the Finite Element Method	3-21	3-58
	Uplift Calculations for Rock Foundations	3-22	3-58
	Effect of Drains	3-23	3-59
	Surge and Wave Loads	3-24	3-59
Section IV.	Supplemental Forces		
	Wind Load	3-25	3-61
	Earthquake Forces	3-26	3-61
CHAPTER 4.	STRUCTURE STABILITY		
Section I.	Scope	4-1	4-1
	Loading Conditions		
	Representative Loading Conditions	4-2	4-1
	Retaining Walls	4-3	4-1
	Inland Flood Walls	4-4	4-1
	Coastal Flood Walls	4-5	4-2
Section II.	Stability Considerations		
	General Requirements	4-6	4-3
	Stability Criteria	4-7	4-3

	<u>Subject</u>	<u>Paragraph</u>	<u>Page</u>
Section III.	Overturning Stability		
	Resultant Location	4-8	4-3
	Overturning Stability Criteria	4-9	4-15
Section IV.	Structure Sliding Stability		
	Overview of Sliding Stability Analysis	4-10	4-15
	Sliding Factor of Safety	4-11	4-17
	Assumptions and Simplifications	4-12	4-18
	General Wedge Equation	4-13	4-20
	Slip-Plane Angle	4-14	4-23
	Single Wedge Analysis	4-15	4-24
	Multiple Wedge Analysis	4-16	4-25
	Sliding Stability Criteria	4-17	4-27
	Design Considerations	4-18	4-27
Section V.	Bearing Capacity Analysis		
	General Computations	4-19	4-28
	Inadequate Bearing Capacity	4-20	4-28
	Bearing Capacity Criteria	4-21	4-28
Section VI.	Summary of Design Procedures		
	Design Procedures	4-22	4-28
CHAPTER 5.	FOUNDATION ANALYSES		
Section I.	Bearing Capacity of Wall Foundations		
	Analysis Principles and Methods	5-1	5-1
	General Bearing Capacity Equation	5-2	5-1
	Bearing Capacity Factors	5-3	5-2
	Embedment Factors	5-4	5-4
	Inclination Factors	5-5	5-4
	Base Tilt Factors	5-6	5-7
	Ground Slope Factors	5-7	5-7
	Effective Overburden Pressure	5-8	5-7
	Combination of Factors	5-9	5-8
	Example	5-10	5-8
Section II.	Other Considerations		
	Settlement	5-11	5-8
	Deep-Seated Sliding	5-12	5-8
	Liquefaction Susceptibility	5-13	5-11
CHAPTER 6.	DESIGN AND CONSTRUCTION DETAILS AND CAUSES OF UNSATISFACTORY PERFORMANCE		
	Foundation Preparation	6-1	6-1
	Concrete Mixture Proportions	6-2	6-1
	Constructability	6-3	6-1
	Joints	6-4	6-1
	Soil Backfill	6-5	6-3
	Drainage	6-6	6-4
	Causes of Unsatisfactory Performance	6-7	6-15

	<u>Subject</u>	<u>Paragraph</u>	<u>Page</u>
CHAPTER 7.	SPECIAL CONSIDERATIONS FOR FLOOD WALLS		
Section I.	General Characteristics		
	Introduction	7-1	7-1
	Rationale for Loading Cases	7-2	7-1
Section II.	Seepage Control		
	General Considerations	7-3	7-3
	Underseepage Control	7-4	7-3
Section III.	Foundation Considerations		
	Base Types	7-5	7-10
	Horizontal Water and Earth Loads on Keys	7-6	7-10
	Unsuitable Foundation Material and Bank Stability	7-7	7-10
	Scour Protection	7-8	7-13
Section IV.	Types of Monoliths		
	Change-of-Alignment Monoliths	7-9	7-13
	Closure and Abutment Monoliths	7-10	7-13
	Drainage Structure Monoliths	7-11	7-13
	Transition Sections Between Flood Walls and Levees	7-12	7-13
Section V.	Water Stops and Joints		
	Water Stops	7-13	7-17
	Contraction and Expansion Joints	7-14	7-17
Section VI.	Site Considerations		
	Adjacent Structures and Rights-of-Way	7-15	7-21
	Architectural and Landscaping Considerations	7-16	7-22
Section VII.	Instrumentation		
	General and Specific Considerations	7-17	7-22
	Types of Instrumentation	7-18	7-23
Section VIII.	Operation and Maintenance Manual Requirements		
	General Coverage	7-19	7-24
Section IX.	Review of Existing Flood Walls		
	Inspection	7-20	7-24
	Repair Measures	7-21	7-26
CHAPTER 8.	CONCRETE GRAVITY WALLS		
	General Factors	8-1	8-1
	Foundation Investigation	8-2	8-1
	Materials	8-3	8-1
	Design	8-4	8-1
CHAPTER 9.	CANTILEVER REINFORCED CONCRETE WALLS		
	General Characteristics	9-1	9-1
	Foundation Investigation	9-2	9-1
	Materials	9-3	9-1
	Reinforcement Cover	9-4	9-1

	<u>Subject</u>	<u>Paragraph</u>	<u>Page</u>
	Load Cases	9-5	9-1
	Structural Stability	9-6	9-1
	Structural Design	9-7	9-1
	Reinforced Concrete Design	9-8	9-3
	Foundation Analyses	9-9	9-11
CHAPTER 10.	ALTERNATE TYPES OF RETAINING WALLS		
Section I.	Introduction		
	Classes of Retaining Walls	10-1	10-1
	Alternate Types of Retaining Walls	10-2	10-1
Section II.	Mechanically Stabilized Backfill Systems		
	General Background	10-3	10-1
	Available Systems	10-4	10-1
	Advantages and Disadvantages	10-5	10-2
	Cost Considerations	10-6	10-7
	Mechanisms and Behavior	10-7	10-7
	Materials	10-8	10-9
	Design Considerations	10-9	10-10
	Construction Considerations	10-10	10-12
	Instrumentation and Monitoring	10-11	10-13
	Maintenance and Repair	10-12	10-13
Section III.	Precast Concrete Modular Systems		
	Background	10-13	10-14
	Basic Components	10-14	10-14
	Advantages and Disadvantages	10-15	10-14
	Design Considerations	10-16	10-14
	Construction Considerations	10-17	10-19
	Instrumentation and Monitoring	10-18	10-20
	Maintenance and Repair	10-19	10-20
APPENDIX A.	REFERENCES		A-1
APPENDIX B.	BIBLIOGRAPHY		B-1
APPENDIX C.	NOTATION FOR CHAPTERS 3, 4, and 5		C-1
APPENDIX D.	NOTATION FOR CHAPTER 9		D-1
APPENDIX E.	COMPARISON OF DANISH CODE AND JAKY EQUATIONS FOR AT-REST COEFFICIENT WITH COULOMB COEFFICIENT FOUND USING REDUCED SHEAR STRENGTH PARAMETER ϕ_d		E-1
APPENDIX F.	DERIVATION OF GENERAL WEDGE EQUATION FOR SINGLE WEDGE ANALYSIS (EQUATION 3-23)		F-1

	<u>Subject</u>	<u>Paragraph</u>	<u>Page</u>
APPENDIX G.	DERIVATION OF EQUATIONS FOR CRITICAL SLIP- PLANE ANGLE (α) FOR DRIVING AND RESISTING WEDGES		G-1
APPENDIX H.	DERIVATION OF PRESSURE COEFFICIENTS FOR SOLUTION OF LATERAL EARTH PRESSURE PROBLEMS		H-1
APPENDIX I.	DERIVATION OF EQUATION FOR DEPTH OF CRACK d_c IN COHESIVE SOIL		I-1
APPENDIX J.	LATERAL PRESSURES DUE TO COMPACTION		J-1
APPENDIX K.	DERIVATION OF VERTICAL SHEAR FORCE FOR UPWARD SLOPING BACKFILL		K-1
APPENDIX L.	DERIVATION OF GENERAL WEDGE EQUATION FOR MULTIPLE WEDGE ANALYSIS		L-1
APPENDIX M.	LATERAL EARTH PRESSURE COMPUTATIONS, EXAMPLES		M-1
APPENDIX N.	STABILITY, BEARING CAPACITY, AND REINFORCEMENT COMPUTATIONS, EXAMPLES		N-1
APPENDIX O.	COMPUTER PROGRAM ABSTRACTS FOR REFERENCED PROGRAMS		O-1
GLOSSARY		Glossary	1

LIST OF FIGURES

<u>Figure</u>		<u>Page</u>
2-1	Types of retaining walls	2-2
2-2	Types of flood walls	2-3
2-3	Less commonly used flood wall types	2-5
2-4	Drained friction angle versus plasticity index	2-9
2-5	SPT correction to 1 tsf (2 ksf)	2-13
2-6	ϕ' versus N' for granular materials	2-13
2-7	q_c/N versus D_{50}	2-14
2-8	Soil classification from cone penetrometer	2-14
2-9	Friction angle of granular backfills	2-16
3-1	Development of earth pressures for a cohesionless material	3-3
3-2	Relationship of earth pressures to wall movements	3-4
3-3	Vertical and horizontal pressures in a cohesionless soil mass	3-7
3-4	Forces on base of wall	3-10
3-5	Base pressures	3-12
3-6	At-rest earth pressure coefficients	3-14
3-7	Application of the strength mobilization factor	3-15
3-8	Mohr-Coulomb failure criterion	3-16
3-9	Comparison of active earth pressures	3-20
3-10	Variables used in Coulomb equation	3-21
3-11	Comparison of passive earth pressures	3-24
3-12	Wedge method on driving side	3-27
3-13	Force polygon for wedge method on driving side	3-28
3-14	Wedge analysis for irregular backfill	3-30
3-15	Surcharge effect on critical slip plane	3-32
3-16	Wedge analysis in layered soil	3-33
3-17	Wedge method for resisting-side wedge	3-36
3-18	Passive earth pressure coefficients	3-38
3-19	Lateral pressures, one soil completely above water table or completely below water table	3-40
3-20	Lateral pressures, one soil, water, finite surcharge	3-41
3-21	Lateral pressures, three soils, water	3-43
3-22	Pressure distribution due to irregular backfill	3-44
3-23	Lateral pressure distribution; active case, soil with cohesion	3-46
3-24	Lateral pressure distribution; passive case, soil with cohesion	3-47
3-25	Increase in pressure due to point load	3-48
3-26	Increase in pressure due to line load	3-49
3-27	Increase in pressure due to strip load	3-50
3-28	Resultant forces, point and line loads	3-51
3-29	Approximate line of action for line loads	3-52
3-30	Design pressure envelope for nonyielding walls with compaction effects	3-54

LIST OF FIGURES (Continued)

<u>Figure</u>		<u>Page</u>
3-31	Water pressures from flow net	3-56
3-32	Water pressure by line-of-creep method	3-57
3-33	Seepage path for line of creep	3-58
3-34	Driving and resisting seismic wedges, no saturation	3-63
3-35	Influence of k_v and β on magnification factor	3-66
3-36	Seismic wedges, water table within wedge	3-70
3-37	Static and dynamic pressure diagrams, water table within wedge	3-71
3-38	Static and dynamic pressure diagrams, cohesive fill, water table within wedge	3-75
3-39	Hydrodynamic forces for freestanding water	3-78
4-1	Stability considerations for retaining and flood walls	4-4
4-2	Forces for overturning analysis for wall with horizontal base	4-8
4-3	Forces for overturning analysis for wall with a sloping base	4-9
4-4	Relationship between base width in compression and resultant location	4-11
4-5	Forces for overturning analysis for wall with horizontal base and key	4-12
4-6	Forces for overturning analysis for wall with sloping base and key	4-13
4-7	Shear force for upward sloping backfill	4-14
4-8	Typical soil/structure system with an assumed failure surface	4-16
4-9	Free-body diagram of i^{th} wedge	4-19
4-10	Geometry of typical i^{th} wedge and adjacent wedges	4-21
4-11	Single wedge analysis of sliding stability	4-26
4-12	Wall design flowchart	4-29
5-1	Terms used in bearing capacity equation	5-3
5-2	Deep-seated sliding analysis with vertical face of driving wedge at heel	5-9
5-3	Deep-seated sliding analysis with vertical face of driving wedge at toe	5-10
5-4	Shallow shear surface	5-11
6-1	Inclined drainage blanket	6-4
6-2	Effect of drain location on excess hydrostatic pressures on the failure plane	6-6
6-3	Drainage blanket located adjacent to retaining wall	6-7
6-4	Prefabricated drainage composite used as drain adjacent to retaining wall	6-8
6-5	Drainage system to prevent frost penetration behind retaining wall	6-8
6-6	Drainage system to use with clay backfill	6-9
6-7	Inspection hole for longitudinal drain	6-10

LIST OF FIGURES (Continued)

<u>Figure</u>		<u>Page</u>
6-8	Vertical check valve at end of longitudinal drain	6-11
6-9	Approximation for estimating reduction in permeability of narrow size-ranged aggregate caused by turbulent flow	6-14
6-10	Summary of experience with unsatisfactory retaining walls	6-16
7-1	Flow around interior embedded water stop in the base	7-4
7-2	T-type flood wall--horizontal base	7-5
7-3	Uplift pressures for a wall with a sheet pile cutoff	7-7
7-4	T-type flood wall--sloped base	7-11
7-5	Removal limits of unsuitable foundation material	7-12
7-6	Return keys on reentrant monolith	7-14
7-7	Flood wall-levee transitions	7-15
7-8	Typical detail of joint between I-wall and T-wall	7-16
7-9	Typical joint and water stop details	7-18
7-10	Emergency measures to control piping	7-27
7-11	Permanent water stop repair measures	7-28
9-1	Shear force for upward-sloping backfill	9-2
9-2	Rectangular beam, simple bending with no compression reinforcement	9-7
9-3	Rectangular member, bending with small axial compression load, no compression reinforcement	9-8
9-4	Rectangular member, bending with axial tensile load, where $M_u/P_u \geq (d - h/2)$	9-9
9-5	Rectangular member, bending with axial tensile load, where $M_u/P_u < (d - h/2)$	9-10
10-1	Schematic diagram of reinforced earth retaining wall	10-3
10-2	Schematic diagram of reinforced soil embankment retaining wall	10-4
10-3	VSL retained earth retaining wall	10-5
10-4	Tensar geogrid retaining wall	10-6
10-5	Schematic diagram of Doublewal retaining wall	10-15
10-6	Materials used to construct Doublewal retaining wall	10-16
10-7	Schematic diagram of Cribblock retaining wall	10-17
10-8	Schematic diagram of Evergreen retaining wall	10-18
